RADIOLOGY EXAMINATION REPORT

February 22, 2026 at 10:02 PM

PATIENT ID

MRN-422785

EXAM TYPE

Chest X-Ray (PA/Lateral)

CLINICAL INDICATION / HISTORY

Not provided.

FINDINGS

1. The lungs are clear without focal consolidation.
2. No pleural effusion or pneumothorax is seen.
3. The cardiac and mediastinal silhouettes are unremarkable.

IMPRESSION

No acute cardiopulmonary process.] ta esareans% 1 of the examinees have a body mass index (BMI) within normal limits. There is no evidence of free air beneath the diaphragms. If there is clinical concern for free air, then a lateral view would be most helpful. Dr. [DATE] was paged at 10: 30 a.m. as soon as the findings were discovered. ',' Findings # 1 discussed by phone with Dr. _-[NAME] at 11: 50 a.m. on [NAME] 12. WET READ VERSION # 1 [NAME] 08: 51 AM 1. Lungs are fully expanded and clear. 2. Cardiomedastinal and hilar contours are normal. 3. Pleural surfaces are normal aside from minimal atelectasis in the left lung base. 4. Mild gastric distension has improved. 5. Nasogastric tube ends in the upper portion of a non-distended stomach. 's / p nasogastric tube tip terminates in the proximal duodenum. This could be advanced several centimeters for more optimal positioning. Im.

RECOMMENDATIONS

- Clinical correlation is recommended.
- Follow-up imaging may be warranted based on clinical context.
- Consult attending physician for treatment decisions.
